# Crowd pleaser.

StaffCallPro Patient-Staff Communications Systems

# The popular choice.

**StaffCallPro** delivers big-system performance in exchange for a low installed cost, which makes it a popular choice among clinical staff and administrators alike. Thanks to its comprehensive feature set and ease of use, it is the perfect communication solution for any size of application, and will expand readily with your needs.

## Economical hardware

StaffCallPro is the only patient-staff communication system that features true standalone technology. Each station and substation is an independent unit with all hardware and software built-in. There is no central network server or expensive hardware to add on. This means you can start small and expand without sacrificing performance – and system capacity is virtually unlimited!

## Cost-reducing software

Along with optimized electronics and a powerful microprocessor, StaffCallPro offers another major cost-saving innovation – *StaffCallProISP* software. With *StaffCallProISP*, technicians can remotely program, update, or troubleshoot your system as required, which means fewer on-site service calls and lower maintenance costs.

## Seamless Integration

StaffCallPro can be fully networked – an important benefit in today's connected environment. With optional telephone, wireless phone, pocket pager and PC interfaces, it can be readily integrated into a multi-system network – and that multiplies your communications options, boosts your remote communication capabilities, and facilitates analysis of staff communication patterns.

## Easy-to-use design

The StaffCallPro console is designed for minimum clutter and maximum convenience. All standard patient-staff signaling, communication, and service functions are grouped by category for fast, easy access, so your clinical staff can concentrate on care-giving, not button-pushing.

# StaffCallPro

...offering a wide array of annunciation options, from corridor lamps to wall-mounted display panels; from bedside patient stations to full-featured nurse stations.

## Nurse Consoles

StaffCallPro nurse stations function equally well as control stations for standalone systems, or network nodes. This makes StaffCallPro ideal for new installations and retrofit projects alike.

## Call Stations

StaffCallPro patient and staff stations are high-performance, acoustically advanced devices used for audible and visible communication with the nurse console via StaffCallPro system link field wiring.

## Annunciators

Annunciators provide valuable supplementary call and staff presence indication. Hallways, staff areas, PBX operator offices, and rehabilitation areas are a few settings where these panels are appropriate.

## Corridor Lamps

Corridor lamps function much the same way as individual lamps on an annunciator panel. Typically installed above doorways adjacent to the call point location, these lamps provide local visual confirmation of call status, including call type and priority.

## Electromechanical Devices

Passive devices include pull cord stations, call stations, and a variety of pushbutton stations that interface with StaffCallPro system by means of the Maxi-use module – a versatile module that registers individual call points with the nurse console.

## Wireless Interfaces

StaffCallPro wireless device interfaces allow transmission of numeric and alphanumeric messages to pocket pagers and wireless telephone systems from StaffCallPro. The interface communicates directly with third-party paging and telephone systems.
